

DHCP →

- DHCP uses UDP as transport layer protocol we make server as DHCP server so that all end devices dynamically get the IP address.

⇒ Outcomes →

- we learn to make DHCP server
- How to dynamically assign IP address to end devices.
- DHCP DORA process stand for following messages b/w client and server.

⇒ message flow b/w DHCP client.

- we configured the server but the start, end range, no of uses after ~~stop~~ learning DNS on in DHCP and see that IP address is configured.
